DATA ARTICLE TEMPLATE V.19 (DECEMBER 2024)

AUTHOR INSTRUCTIONS

• Please check that your dataset meets the criteria on our webpage What Data are Suitable for Data in Brief. Please also see our FAQ page, which introduces further *Data in Brief* article types.

• Please fill in the template below. Note that we can only consider data articles submitted using this template. For help with preparing your manuscript, please also see our webinar on how to fill in the template, our Guide for Authors, and our step-by-step video guide on how to submit to Data in Brief.

• Please be advised that parts of this template are locked for editing. The parts that are editable are highlighted in yellow. **Please do not edit the template other than the section highlighted in yellow**.

• Brief **instructions are in blue italics**. Additional instructions appear in comment boxes to the right of the main text.

• It is mandatory to **publicly share your research data in a repository** referred to in your *Data in Brief* article.

• Before submitting your data article, please **delete this page as well as all instructional text in blue italics and all comment boxes in this template**.

• For inspiration on how to complete the *Data in Brief* template, **please find exemplary articles** here.

In case you still have questions, please **email our Scientific Editors** at: dib-me@elsevier.com.

Please click here for a survey to **share your anonymous feedback** on this template and how it might be improved.

Comentado [SK1]: This is an example of a comment box with additional instructions.

Comentado [SK2]: View our repository requirements and non-exhaustive list of recommended data repositories here. If there is no specialized repository for your data, please use a generalized repository such as Mendeley Data. Please see our webinar guide on Data repositories for more information.

ARTICLE INFORMATION

Article title

The article title must include the word 'data' or 'dataset'.

Authors

*Please list all authors (first name(s) - last name) and mark the corresponding author with *.*

Affiliations

Please include the full postal address of each author's institution.

Corresponding author's email address and Twitter handle

Please use your institutional email address. If you have one, please also add your Twitter handle here.

Keywords

Include 4-8 keywords, separated by semi-colons. Please do not repeat words used in your title.

Abstract

*The abstract should be 100 to 500 words long and describe the data collection process, the dataset, and its reuse potential. It should **not** provide conclusions or interpretations.*

SPECIFICATIONS TABLE

[Instruction for SPECIFICATIONS TABLE in comment box]

Subject	Please select Subject from the dropdown list.
Specific subject area	*Briefly describe the specific subject area. Max 150 characters (without spaces).*
Type of data	*Please list your type(s) of data and data formats. Delete any description from the lists that does not apply. If your data type is not featured, please manually add it.* Table, Image, Chart, Graph, Figure etc. Raw, Analyzed, Filtered, Processed etc.
Data collection	*Briefly describe how the data were collected. Please provide information on instruments you used (e.g., microscope, mass spectrometry, specific hardware or software etc., including relevant make/model details) as well as on methods used for collecting data or inclusion/exclusion criteria. You may also describe how the data were normalized. In case of questionnaires, please briefly describe the sources used to derive the question items. Max 600 characters (without spaces).*

Comentado [SK3]: Please avoid acronyms and abbreviations where possible, and ensure that the article title differs from the title used in the data repository.

If your data article supports an original research article, the title should differ from the title used in the research paper.

Comentado [SK4]: Do not use words such as 'study', 'results', or 'conclusions' – a data article should only describe your data. Also, please ensure that the abstract differs from the description provided in the data repository.

Comentado [SK5]: This table provides general information on your dataset.

Every section of the table is mandatory. Please enter information in the right-hand column and remove all the instructions in blue and italic print.

Please do not change the text in the left column of the specifications table, but only enter your answers in the right column.

For a nice example of how to fill in this table, see here.

Comentado [SK6]: Note that you must submit a copy of the questionnaire/survey in English to your data repository. If the survey was not conducted in English, please provide an English-language translation.

Data source location	*Please mention where the data were collected (e.g. geographical coordinates) or where the data are stored (typically your affiliation).*
Data accessibility	***Please note:** All raw data referred to in this article must be made publicly available in a data repository prior to publication. Please indicate here where your data are hosted (the URL must be working at the time of submission and editors and reviewers must have anonymous access to the repository):* Repository name: ... Data identification number: *(or DOI or persistent identifier)* Direct URL to data: ... Instructions for accessing these data: ...
Related research article	*If your manuscript supports a related research article, please cite this article here. If your manuscript is not related to a research article, please state 'none'. You should **list only one article here**. Please upload a copy of your related research article to your submission.*

VALUE OF THE DATA

*This section states why these data are of value to the scientific community. Please **provide between 3 and 6 bullet points** and answer at least the questions below (delete the questions afterwards). Each bullet point should be a maximum of 150 words long, and should not include conclusions or inferences:*

- Why are these data valuable?
- How can these data be reused by other researchers?
- ...

BACKGROUND

Please describe your original motivation and context behind compiling this dataset. For example, briefly include information on the theoretical or methodological background against which you generated the data. Do not make concluding, interpretive, or otherwise inferential statements about the dataset. In case your data article is related to an original research article, please briefly describe how the data article adds value to the published article (Max. 200 words).

Comentado [SK7]: As appropriate, provide the following information:
- Institution:
- City/Town/Region:
- Country:
- Latitude and longitude (and GPS coordinates, if possible) for collected samples/data:

If you are describing secondary data, also list the (primary) data sources in this section.

Comentado [SK8]: Please make sure that your dataset is finalized and/or published, and not in draft mode on the repository.

View our repository requirements and non-exhaustive list of recommended data repositories here. If there is no specialized repository for your data, please use a generalized repository such as Mendeley Data. Please see our webinar guide on Data repositories for more information.

If you are describing secondary data, you are required to provide a list of the primary data sources used in the Data source location section and make the full secondary dataset publicly available via the data repository.

Comentado [SK9]: Only if applicable (otherwise please delete this line).

Important: For data that require access controls (e.g., for ethical reasons), please describe how readers can request access. You must also provide a link to any Data Use Agreement (DUA) with the proprietor of the data or upload a copy of it as a supplementary file.

In addition, you must provide a mechanism that allows our Editors and reviewers to access the data without compromising their anonymity. Please include these instructions with your submission. You can include these instructions here and highlight them as "for peer review only". Contact the Scientific Editors (dib-me@elsevier.com) if you have any questions.

Comentado [SK10]: *Data in Brief* considers a data article to support a related research article if the data article describes the dataset used or reported on in the related research article in more depth. Please note that the related research article has to be peer-reviewed, (co-)authored by the same authors (or a subset of the co-authors), and has to be at least accepted for publication. Please see also the Guide for Authors.

For a published article, use this format: ...

Comentado [SK11]: TIP: This section advertises your dataset. Please a) allow the reader to understand the nature of the dataset and b) reach a broader audience.

For a nice example of how to write this section, see here.

Article template

DATA DESCRIPTION

This section describes your dataset. Refer to all the data folders, subfolders, and files in the repository individually, irrespective of whether they relate to raw or analyzed data, and make sure that the reader can follow the structure of your dataset.

Please use visual aids (such as tables, graphs, or figures with captions) to familiarize the reader with your dataset, but ***do not offer background, interpretations, or conclusions****.*

EXPERIMENTAL DESIGN, MATERIALS AND METHODS

This section describes how you acquired the data. Provide a complete description of the experimental design and methods used to acquire these data. For example, include all code (files) and software used for data analysis or data generation, and describe tools, instruments, and experimental conditions.

It is important that this section is as comprehensive as possible. There is no character limit, and you may use illustrative figures or tables; however, please ***do not offer background, interpretations, or conclusions****.*

LIMITATIONS

Describe any limitations related to the data described in this article. These could be any problems you faced during data collection or curation, limited quality or size of dataset, data biases, etc., but ***should not include limitations of analysis conducted or interpretation*** *(Max. 200 words).*

If there are none, please write 'None' or 'Not applicable'.

ETHICS STATEMENT

Data in Brief's Guide for Authors contains detailed information on the ethical guidelines with which all authors must comply. In addition, we ask you to complete the relevant statement(s) below. Please delete those which are not relevant for your data.

If your work involved human subjects, *please include a statement here confirming that the relevant informed consent was obtained from those subjects, if the research was carried out in accordance with the Declaration of Helsinki, and if it includes the* ***Ethical committee approval and the protocol***

Comentado [SK12]: TIP: The structure of your dataset and the types of files it contains can vary substantially depending on your research. Make sure that you refer to folders, files etc. by their file names, and clearly describe the variables and values they contain.

A nice example of one possibility to describe a dataset can be found here. For a nice example of this section for a questionnaire study, please see here.

Comentado [SK13]: Is your methodology innovative or have you substantially added to an existing research design? If so, writing an **additional methods or protocol article** may be interesting for you. Just like related research articles, data articles and related methods articles are linked on ScienceDirect. Please have a look at the websites of the journals MethodsX and STAR Protocols.

Comentado [SK14]: Tip: Do not describe your data (figures, tables, etc.) in this section – you should have already done that in the Data description section above.

For questionnaire or survey studies, please indicate the sources from where the questionnaire items have been derived/adapted and indicate the degree of adaptation.

A nice example of one possibility to describe the data acquisition process can be found here. For a nice example of this section for a questionnaire study, please see here.

Comentado [SK15]: If this data article supports a related research article, this section should contain more detail than the methods/experimental design section of your related research article, and it should avoid textual overlap.

***number**. A copy of the consent form (in English) can be submitted either in a data repository or under the section 'Consent form' while submitting the manuscript to the system.*

***If your work involved animal experiments,** please include a statement here confirming that those experiments complied with the ARRIVE guidelines and were carried out in accordance with the U.K. Animals (Scientific Procedures) Act, 1986 and associated guidelines; EU Directive 2010/63/EU for animal experiments; or the National Institutes of Health guide for the care and use of laboratory animals (NIH Publications No. 8023, revised 1978). Note, the sex of the animals must be indicated, and, where appropriate, the influence (or association) of sex on the results of the study.*

***If your work involved data collected from social media platforms**, please include a statement here confirming that a) informed consent was obtained from participants or that participant data has been fully anonymized, and b) the platform(s)' data redistribution policies were complied with.*

***If none of the above,** please include a statement confirming that the authors have read and follow the ethical requirements for publication in Data in Brief and confirming that the current work does not involve human subjects, animal experiments, or any data collected from social media platforms.*

CRediT AUTHOR STATEMENT

Please outline the contributions of each co-author, using the categories listed on this webpage.

Comentado [SK16]: Here is an example of a possible CRediT author statement:

Zhang San: Conceptualization, Methodology, Software. **Priya Singh**: Data curation, Writing, Original draft preparation. **Wang Wu**: Visualization, Investigation. **Jan Jansen:** Supervision. **Ajay Kumar**: Software, Validation. **Sun Qi:** Writing- Reviewing and Editing.

ACKNOWLEDGEMENTS

In this section, mention all contributors who do not meet the criteria for authorship.

In addition, please list any funding sources in this section. List funding sources in the standard way to facilitate compliance to funder's requirements.

If no funding has been provided for the research, please include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Comentado [SK17]: For example as follows:
Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

TIP: It is not necessary to include detailed descriptions of programs or types of grants and awards. When funding is from a block grant or other resources available to a research institution, submit the name of the institute or organization that provided the funding.

DECLARATION OF COMPETING INTERESTS

Please choose one appropriate statement from below and delete the one that does not apply (if applicable, please specify the nature of your competing interests).

- The authors declare that they have no known competing financial interests or personal relationships that could have appeared to influence the work reported in this paper.

- The authors declare the following financial interests/personal relationships which may be considered as potential competing interests:

REFERENCES

In this section, please provide a numbered list of references. References are limited to ***a maximum of 20*** *and irrelevant self-citation is not allowed.*

Please format all in-text citations by number(s) in square brackets in line with the text. The actual authors can be referred to, but the reference number(s) must always be given.

IMPORTANT: If your data article supports an original research article, please cite the associated article here; ideally, it should be the first citation.

Please also make sure to cite your dataset in the data repository.

Comentado [SK18]: In the manuscript, please cite the literature you have used while generating your dataset and preparing your manuscript.

Please be advised that *Data in Brief* uses a numbered references style. Please review the References section in the Guide for Authors for a comprehensive guide to the *Data in Brief* reference style.
